DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The antecedent basis for “the text length, vocabulary size, and/or syntactic complexity in the subject's observations” has not been clearly set forth.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Leyva et al. (USPN 6,663,392; hereinafter Leyva).

Regarding claims 1 and 2, Leyva discloses a method for identifying a subject's thought patterns, the method comprising detecting and measuring thought disorder by: providing the subject with a picture or other stimulus for which salient items have already been identified (See Fig 1A ref. 103); causing the subject to verbally describe what he or she observes; transcribing or recording subject's verbal observation (Col. 3, lines 22-26); and determining the number and type of differences in vocabulary

Art Unit: 3715

between the subject's description and a predetermined response to develop a score of the subject's description of the picture or stimulus (See Fig. 1A, ref. 111).

Regarding claims 3 and 6, Leyva discloses a method wherein scoring is provided in various levels of complexity (See Fig 1A, ref. 102).

Regarding claims 4 and 7, Leyva discloses a method wherein the stimulus uses an image of any type (See Figs. 2A-2D).

Regarding claims 5 and 8, Leyva discloses a method wherein the subject's observations are captured using computerized speech recognition (Col. 3, lines 22-26).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Reynolds et al. (USPN 6,435,878) disclose a computerized system for analyzing mental ability.
